EXPERIENCE

Edward is a Registered General Nurse, qualifying in 2019. He is located in Cheshire but able to work with clients in the Northwest and Midlands. Edward has clinical experience working with patients who have experienced major trauma, including spinal and brain injuries. He has worked in intensive care units and developed strong clinical assessment and decision-making skills.

Edward has worked in Australia for three years where he had the opportunity to extend his skills with emergency treatment teams. He was involved in extensive liaison with multi-disciplinary teams to manage discharges back into rural community settings. These were often vast, low populated areas with limited local resources. Edward had to ensure the discharge plans were robust, with comprehensive management plans in place to facilitate safe and successful discharges.

Edward has managed Complex Care packages for the past five months, developing his knowledge, skills and understanding of care in the community and costs. He has collaborated with Continuing Healthcare Teams and Integrated Care Boards. He has provided training and mentorship to care and other nursing staff, including tracheostomy management and gastrostomy care.

With his clinical experiences, Edward has established strong interpersonal, communication and leadership skills. He is passionate about being transparent with all people he works with, always keeping the client at the forefront of all he does. He has demonstrated experience of being able to adapt in the most extreme environments and with complex health conditions.
